

PRIORITY PRODUCT | OVERSEAS B2B

MEK-03s

Pre-treatment considered with substrate and site conditions.

PRODUCT SNAPSHOT

ROLE

Pre-treatment considered with substrate and site conditions.

CURRENT FORM

Weak-alkaline powder; pH 8.7 in current catalog information.

POTENTIAL SETTINGS

Preparation routes involving difficult odor or contaminated surfaces.

Before the first test

- What substrate and finish are present?
- What cleaning, oil, residue or prior treatment exists?
- What final coating step and drying window are planned?

A PRACTICAL ROUTE

1. Share the use case
2. Technical and site review
3. Sample or limited validation
4. Review before commercial scale

MEK-03s is presented as part of an application system. Compatibility, preparation and method require project-specific review before scale.
