

PRIORITY PRODUCT | OVERSEAS B2B

NANOBEST ST

Visible-light-responsive photocatalyst coating for project-specific applications.

PRODUCT SNAPSHOT

ROLE Visible-light-responsive photocatalyst coating for project-specific applications.

CURRENT FORM Photocatalyst coating; visible-light-responsive positioning.

POTENTIAL SETTINGS Indoor surfaces, facilities, vehicles, materials and OEM evaluation.

Before the first test

- Which substrate and surface condition apply?
- What light, humidity and operating environment exists?
- Which evidence and observation method support the intended claim?

A PRACTICAL ROUTE

1. Share the use case
2. Technical and site review
3. Sample or limited validation
4. Review before commercial scale

Scope, method and market-facing claims require project-specific technical review. Test results should not be generalized beyond the relevant substrate, environment and method.

Discuss one real project with the Japan team.
